## What if OPEC+ Keeps Producing to Match Returning Demand?

By Jay Stevens | July 17, 2020

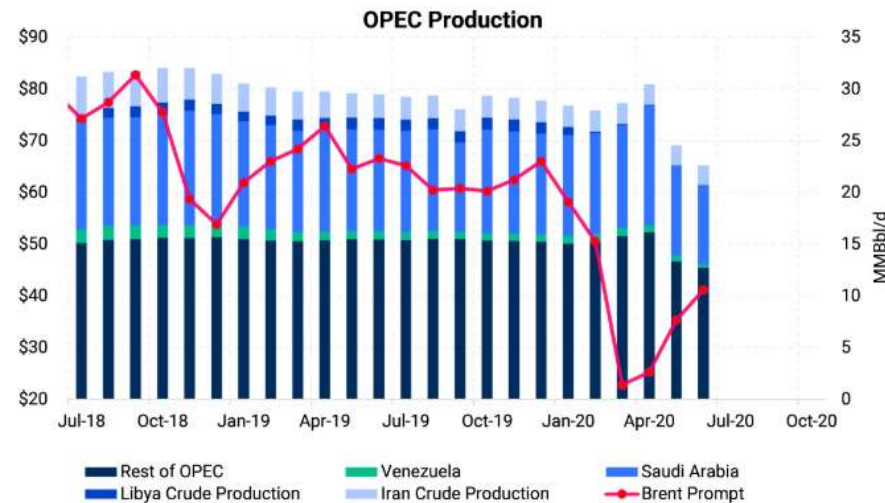

[Back to AEGIS Market Summary Blog](#)

The cartel has enough spare capacity to match demand barrel for barrel through 2021. They could slowly open the taps on supply as demand slowly returns to pre-COVID-19 levels. This type of OPEC+ policy could keep crude oil prices trading in a tight range by not allowing supply and demand to separate.

Global oil demand has risen dramatically from April lows as governments reduce or remove mandatory lockdowns that kept many from using petroleum products. Demand is still not near pre-COVID levels but continues to climb.

OPEC+ this week signaled it would increase supply in August, because demand was recovering. Continuing this policy, of supplying more crude into the market as demand increases, implies OPEC+ would match supply cuts evenly with returning demand.

The group has been curbing supply by up to 9.7 MMBbl/d since April, and will carry those cuts through the end of July. In August, the oil cartel will start to unwind a portion of those cuts. (see [OPEC+ Plans 2 MMBbl/d Production Increase for August](#)).

EnerCom, Inc. is an internationally recognized management consulting firm advising companies on investor relations, analysis and valuation, corporate strategy/board advisory, Environmental, Social & Governance (ESG), marketing, media, branding, and visual communications design.

Founded in 1994, EnerCom, Inc. was built with a vision of being a trusted advisor to the global energy industry and energy capital markets. Our industry knowledge supports the delivery of our high-quality, value added services. Our clients trust our experience delivering integrated marketing and corporate branding programs.

# Chevron and Noble Energy Transaction

- **The total equity acquisition value is ~\$5 billion**
- 100% stock consideration - Noble shareholders should own approximately 3% of the combined company
- Total consideration of \$10.38 per share, ~12% premium based on 10-day average, ~8% vs. Friday
- Analyst Commentary:
  - **"M&A has been widely anticipated in the E&P space.** CVX's agreement to acquire NBL in an all-stock transaction that values NBL at a 7% premium to last week's closing price is neutral for the sector at best, in our view, **if it does not solicit a competing offer.**" – Stifel
  - "A good transaction for both sides, in our view... Importantly, we believe the acquisition of Noble Energy **adds high-quality complementary assets at a relatively low-cost/low-risk to Chevron.**" – Wells Fargo
  - "We note that this is **the first major M&A transaction in the energy space since the lows of the COVID-19** driven oil price rout. However, the **small premium suggests that this deal was opportunistically-driven**, rather than by a strong appetite for consolidation." – TD Securities
  - The acquisition provides CVX **complementary assets** in the Delaware Basin and internationally, **while establishing an asset position in the DJ Basin**... This is an opportune acquisition as it essentially eliminates (significantly dilutes) NBL's cost-of-capital disadvantage given the company's concentration of perceived higher business risk assets in Colorado/eastern Mediterranean." – MKM Partners
  - "Given transaction is essentially in-line with our price target, we like the deal and believe **investors can participate through the upside in CVX** which remains a top pick in the integrated space." – Tudor, Pickering, Holt & Co

# What is Chevron Buying?

- Lower 48 NBL adds:
  - ~92k Permian acres
  - ~ 336k DJ Basin acres
  - ~35k Eagle Ford acres
- International NBL adds:
  - 39.6% interest in Leviathan
  - 25% interest in Tamar
  - Exploration blocks in Egypt
  - Legacy production in Equatorial Guinea

# Bam! It's Earnings Season Again

## Halliburton:

- HAL delivered strong 2Q'20 operating results highlighted by better-than-expected margins due to excellent progress on its recent cost-cutting measures, and strong FCF
- Halliburton recognized \$2.1 billion of pre-tax impairments and other charges to further adjust its cost structure to current market conditions. These charges consisted primarily of non-cash asset impairments, mainly associated with pressure pumping equipment and real estate, as well as inventory write-offs, severance, and other costs.
- International will be more resilient near-term:
  - **International** revenue in the second quarter of 2020 was \$2.1 billion, a **17% decrease** when compared to the first quarter of 2020
  - **North America** revenue in the second quarter of 2020 was \$1.0 billion, a **57% decrease** when compared to the first quarter of 2020.

## What does Tomorrow's OFS Company Look Like?

- Halliburton, Microsoft and Accenture announced a five-year strategic agreement to advance Halliburton's digital capabilities in Microsoft Azure. Under the agreement, Halliburton will complete the move to cloud-based digital platforms and strengthen our customer offerings by enhancing real-time platforms for expanded remote operations; improving analytics capability utilizing machine learning and artificial intelligence; and accelerating the deployment of new technology and applications for overall system reliability and security.
